Coil Ratings *(25ºC, Currents & Power At Nominal V)*

Coil P/N Designation	B	C
Coil Voltage, Nominal	12 VDC	24 VDC
Coil Voltage, Max	16 VDC	32 VDC
OPEN and CLOSE Voltage, Min[2,3]	7.5 VDC	15 VDC
OPEN and CLOSE Current, Min[2] (75ms)	3.4 A	1.7 A
Coil Back EMF[1]	0	
Transient on all pins	±50V	
Reverse polarity on all pins	50V	

1 Coils are switched internally with a FET, so no fly-back/suppression voltage is seen at the coil inputs.
2 OPEN and CLOSE inputs must be momentary switches. If either switch is closed all the time, it will prevent the unit from functioning properly.
3 CLOSE input voltage must have a minimum pulse of 100ms.

NOTES:

1. **How it works:** The LVD is installed between the battery and all loads. If the voltage drops below the setpoint voltage for a predetermined period of time, the LVD will open, disconnecting all loads including the LVD itself, thus protecting the batteries from any further discharge. Once the LVD has opened, the CLOSE pin can be activated forcing the LVD to close, allowing the vehicle/system to be restarted.
